Supervisor: Mr. MAKUMBI THOMAS

***A final year project report submitted in partial fulfilment of the requirements for the award of
the BSc. In Agro- processing engineering of Busitema University.***

JAN 2021

ABSTRACT

Mango processing has become increasingly important in Uganda and represents an important food source. In addition, demand for the fruit is high and mangoes can provide small farmers with a valuable source of income.

Mangoes can be processed into purée from whole or peeled fruit. The most common way of removing the skin is hand-peeling with knives but this is time-consuming, expensive, and takes off flavors which may be present in the skin. Steam and lye peeling have been accomplished for some varieties but it has very high investment, operation and maintenance costs, requires skilled labor for operation and maintenance.

The purpose of this study is to design and construct a mango destoning machine that will be able to extract clean mango puree at household level which is beneficial to human health, easy to operate and affordable to both small scale farmers.

This shall be achieved through the adoption of the methodology below; research, analysis, fabrication, performance testing and economic analysis of the machine.

All those methodologies shall result into, an efficient, well assembled, tested and economically evaluated machine if all met.

ACKNOWLEDGEMENT

With great honor, respect and love, I'm highly indebted to the head of department Agro processing Engineering and all my lecturers for professional mentorship and guidance they have bestowed.

Great thanks goes to my supervisors Mr. Thomas Makumbi for the tireless efforts rendered to me during the preparation of this piece of work, may the good Lord abundantly bless u so much. I as well thank the workshop guys where I fabricated my machine Pr.Munyegera, thanks for the time and all the assistance.

DECLARATION

I KALUBA MICHEAL, declare that the work in this proposal report is my own except where indicated with reference within the text and that it has never been submitted before to any university or institution of higher learning for the award of Degree in Agro Processing Engineering, APE. I therefore take full responsibility over it.

CHAPTER ONE	12
1 INTRODUCTION	12
1.1 Background of Mango	12
1.2 Problem statement.....	13
1.3 Significance of the study.....	13
1.4 Objectives of the study.....	14
Main objective	14
Specific objectives	14
1.5 Scope of the study	14
1.6 Justification of the study.	14
1.7 Purpose of the Study	15
CHAPTER TWO	15
2 LITERATURE REVIEW	15
2.1 Introduction.....	15
2.2 Overview of mango production in the world	15
2.3 Mango production in Uganda.	16
2.4 Major mango industrial unit operations in mango processing.	18
2.5 Washing and sorting.....	19
Brushing.....	19
Destoning.....	20
2.6 Different mango products from destoning.	22

Canned mango slices.....	23
Mango puree	23
The mango juices	24
2.7 Pre-ripe stage.	28
2.8 Ripe stage.....	28
2.9 The mango seed kernel	28
2.10 Nutritional Value of Mango Peels	29
2.11 How to eat Mango peels.....	30
3 MATERIALS AND METHODS.....	32
3.1 Introduction.....	32
3.2 Machine description.....	32
3.3 Components of the mango fruit pulp extractor machine.....	33
The hopper.	33
The screw Blade.....	34
The turning shaft.....	34
The conveyor	34
Outlets.....	35
The frame and supports.....	35
Upper cylindrical Drum	35
Lower Cylindrical Drum.....	36
Bearing.....	36
Pulley and Belt.....	37
The power unit.....	37
3.4 Design considerations.	37
3.5 Material Selection	38
3.6 Design and sizing of machine components.....	38

The hopper/inlet	38
Cylindrical Housings.	39
Design of the Shafts.	39
Determination of Torsional Moment, M_t	39
Determining the Minimum Diameter of the shafts	39
Driving system.....	40
