**A RESEARCH DISSERTATION SUBMITTED TO THE FACULTY OF
AGRICULTURE AND ANIMAL SCIENCES IN PARTIAL FULFILMENT OF THE
REQUIREMENTS FOR AWARD OF BACHELORS DEGREE OF ANIMAL
PRODUCTION AND MANAGEMENT OF BUSITEMA UNIVERSITY**

AUGUST, 2018

DECLARATION

I, Acidri Geofrey, declare that this dissertation is original and has never been submitted or presented to any other university or Academic institution for purposes of getting an academic award. All the information in this dissertation is based on my observations and field findings.

Signature:  Date: 17/08/2018

APPROVAL

This dissertation has been supervised and submitted with the approval of my supervisor

Dr. Okwany Patrick

BVM – MUK

Department of Animal production and Management

Faculty of Agriculture and Animal sciences

Busitema University

P.O Box 236, Tororo/226 Busia (U)

Signature: Date:

DEDICATION

This research work is dedicated to my parents, Mr. Anguyo k.o Joseph and Mrs. Mbale Annet, and my friends Jeremy, Bonifance, Kevin, and Olivia Norah for always being helpful and finally my beloved brother Aloro Stephen for his guidance and encouragement towards my studies.

ACKNOWLEDGEMENT

I wish to express my sincere gratitude to Dr. Okwany Patrick my supervisor, for his suggestions, encouragement and support during the research process with all his long accumulated knowledge, skills, experience and intellect.

My special appreciation goes to our research lecturers Dr. Mbogua Joseph and Dr. Etiang Patrick for their tireless efforts during this exercise.

Likewise, I am grateful to the District Veterinary Officer - Arua, Dr. Nguma Willy and Production officer – Oluko sub county, Mr. Abiriga Francis and the entire poultry farmers of Yabavoko Parish.

My memorable gratitude goes to all my class mates, who helped in various aspects during the research exercise.

Finally I acknowledge Almighty God, for protection he granted unto me during the research process.

ABSTRACT

This study was conducted to document medicinal plants used in management of poultry diseases among rural poultry farmers in Yabiavoko parish, Arua district, with a general objective of identifying and documenting the medicinal plants used in treatment and control of various poultry diseases. A total of 223 poultry farmers were purposively selected for the study in Yabiavoko and the data was collected using a semi-structured questionnaire, observation guide, key informant interviews and field guided walk from May to June 2018. Voucher specimens that were used to treat and control poultry diseases were collected, and botanically identified. A total of 27 medicinal plant species belonging to 24 families were identified and documented. Medicinal plants' families of the 24 families were Solanaceae (16.6%), Meliaceae (8.3%), Asteraceae (8.3%), Anacardiaceae (8.3%) and the rest of the families taking up 4.1 percent of the plants. The major factors that limit use of medicinal plants were; seasonal availability of the plants (29.0%), deforestation (24.7%), emergency of modern veterinary drugs (0.8%), wild fires (16.5%), Retainment of knowledge by some farmers, rareness of some plants (6.3 %), low efficacy (1.5 %), inadequate documentation (0.4%), over exploitation (2.7%), poor conservation strategies (2.0%) and Climate change (2.7%). The major preparation methods for medicinal remedies were; Cold extraction (71.3%), powder extract (10.7%), concoction (5.4%), decoction (5.4%) and others (7.2%). Many medicinal plants have not been documented in Arua district, therefore documentation of these plants with their indigenous knowledge is highly needed before their extinction due to over exploitation. Further scientific research is paramount, to test efficacy of these medicinal plants.

CHAPTER ONE

INTRODUCTION

1.0 Background

Medicinal plants include various types of plants used in herbalism and some of these plants have medicinal activities. These medicinal plants contain a rich resources of ingredients which can be used in drug development and synthesis (Acta, *et al.*, 2012). More than 3.3 billion people in the less developed countries utilize medicinal plants on a regular basis for the control of various diseases in both animals and humans for several years (Singh, 2015). Application of these medicinal plants as a source of drugs in treating human and animal diseases has been a traditional practice (Baskaralingam, 2015).

Many studies in different ethnicities in several countries have revealed that resource poor poultry farmers such as China (Shen, *et al.*, 2010), India (Bauri, *et al.*, 2015), Pakistan (Raziq *et al.*, 2012), Iran (Ahvazi, *et al.*, 2012) have used medicinal plants for alleviating poultry diseases, ectoparasites and other livestock diseases. Most of the medicinal plants collected are not cultivated and face a risk of getting depleted or threatened with extinction through habitat destruction and over exploitation (Najnukobe *et al.*, 2011).

Rural poultry farmers such as in Nigeria (Ayeni & Basiri, 2018), Botswana (Moreki, Nelson, & Boitumelo, 2016), Zimbabwe (Marandure, 2016), Kenya (Okitoi, *et al.*, 2007), Namibia (Chinsembu, *et al.*, 2014), Ethiopia (Yigezu, *et al.*, 2014) and South Africa (Luseba & Tshisikhawe, 2013) have revealed the use of medicinal plants for managing poultry diseases and ectoparasites as well as other livestock diseases. According to Guéye* & Guéye, (1999), infectious diseases seriously affect village poultry production in Africa and therefore constitute one of its major threats, however these diseases have been effectively managed using medicinal plants

In Uganda, different studies have been undertaken to document the use of medicinal plants in the management of poultry diseases. Studies by (Lagu & Kayanja, 2010; Nalubega, *et al.*, 2012) have identified medicinal plants in some ethnicities in Uganda. Despite all the wide spread use of medicinal plants, very little of the medicinal plant used in the management of poultry diseases is known to be documented in Arua district and, yet the traditional knowledge on the medicinal plants continues to be passed orally to subsequent generations in many communities (Mathias & McCorkle, 2004). The custodians of traditional knowledge are mainly the uneducated that still
