SUPERVISOR Mr. MASERUKA BENEDICTO

A final year project proposal submitted in partial fulfilment of the requirement for the award of a Bachelor's of science in water resources engineering in Busitema University

ABSTRACT

Showered water is wastewater generated from bathroom sinks and bathtubs from a household, hotel and institutions. Due to the percentage of showered water discharged, there is a lot of greywater discharged that needs to be recycled and reused.

Frequent water shortages in some parts of Uganda have led to poor sanitation in the people's homes of residence, hospitals and institutions due to lack of enough water for showering and cleaning around the shower room. The purpose of the design project was to design and construct water recycling system for showered water that would utilize the available greywater from people's homes of residence to supplement on the only one available ground water source at the country. For the design to be done, showered water quality was determined by collecting samples and testing them using different water quality sensors like turbidity and electrical conductivity sensors, generated quantity of showered water was determined depending on the total water consumption by the students.

Design of various components of the recyclable water shower system was done using the given relevant formulas and equations. From the research, showered water being generated currently was 18 liters per day. The showered water being discharged showed poor physical chemical characteristics and thus needs treatment before reuse. Distribution pipes, collection tank were sized then treatment units where rapid sand filter, clear tank pump, storage tank and were sized.

DECLARATION

We, hereby declare to the best of our knowledge, that this project report is an outcome of our original work and that it has not been presented to any institution of learning for an academic award.

APPROVAL

This final research report has been submitted to the Faculty of Engineering for examination with approval of our supervisor.

MAIN SUPERVISOR: MR. MASERUKA S BENDICTO

ACKNOWLEDGEMENT

First, we would like to thank the almighty God for his unspeakable grace, guidance and protection during the compilation of this research report.

We would like to express our genuine gratitude and appreciation to our academic supervisor Mr. Maseruka Benedicto, and the entire department of water resources and mining engineering, for their encouragement, guidance and support from the initial to the final level of this writing and for accepting us to work as a team. They enabled us to develop and understand the subject matter as well as the appropriate form of delivery of this research and above all realize that two heads are better than one. Without his assistance, brotherly approach and free discussion, this report would not have been completed.

Lastly, we are grateful to Faculty for enabling us access the laboratory and workshop for carrying out tests with ease and the construction of the prototype respectively, the entire staff for the permission granted to carry on the research work, to our fellow students and friends in and out of the university for their unseasonal support and to our parents and guardians. May God bless all your endeavors.

Contents

ABSTRACT	i
DECLARATION.....	ii
APPROVAL.....	iii
ACKNOWLEDGEMENT.....	iv
LIST OF FIGURES	viii
LIST OF TABLES	ix
1.CHAPTER ONE: INTRODUCTION	1
1.1 Background.....	1
1.2 Problem statement	2
1.3 Justification.....	2
1.4 Significance	2
1.5 Objectives of the study	3
1.5.1 Main objective	3
1.5.2 Specific Objectives	3
1.6 SCOPE OF STUDY	3
1.6.1 Conceptual scope.....	3
1.6.2 Time scope.....	3
1.6.3 Geographical scope	3
2.1 Introduction.....	4
2.1 Wastewater	4
2.2 Shower water characteristics and composition	4
2.3 Importance of shower water recycling	4
2.4 Shower water quality parameters	4
2.5 Electrocoagulation.....	5
2.5.1 Mechanisms of destabilization of contaminants.....	5
2.5.3 Interface of colloidal particles	6
2.5.4 Stability of colloids in aqueous solutions	6

2.5.6 Principles of electrocoagulation	7
2.5.7 Reactions at the electrodes.....	7
2.5.8 Advantages and drawbacks of electrocoagulation of EC	8
Advantages	8
2.5.9 Factors influencing the efficiency of EC	9
2.6 System simulation.....	12
3.CHAPTER THREE: METHODOLOGY	13
3.1 SPECIFIC OBJECTIVE ONE:	13
3.1.1 System modelling using solid works and ANSYS Fluent software's	13
3.1.2 Operations of the software.....	13
3.1.3 Outputs of the software.....	14
3.2 SPECIFIC OBJECTIVE TWO.....	14
3.2.1 Vent pressure Quantification of water at the shower head	14
3.3 Design of the waste water settling tank	15
3.4.1 Design of the ceramic filter:	16
3.4.2 Determining the mix ratios:.....	16
3.4.3 The porosity of the filter depends on the linear equation	18
3.4.4 Cross-sectional area of the filter disc.....	18
3.4.5 Head loss across the filter:	18
3.5.1 Design of the electro coagulation system	19
3.5.2 Design of the components in the EC system	20
3.5.3 Determination of contact time(t) of the solution	21
3.5.4 Determination of charge(q) in the system	22
3.5.5 Material selection for container	23
3.5.6 Electrolyte.....	23
3.5.7 Electrode design.....	23
3.5.8 Sizing of the electrode plates	24
3.5.9 Standard potential	24
3.5.9 Cell potential.....	25
3.5.10 Determination of total voltage to be used by the system.....	26
3.6 Design of the clear water tank	27

3.7.1 WATER PUMP SUBSYSTEM.....	27
3.7.1 Determination of the pump capacity.....	29
3.7.2 Calculation of the Pump Flow Rate (Q)	29
3.7.3 Calculation of Total Head in Pump (H).....	30
3.7.4 Minor losses.....	31
3.7.5 Head Loss/Pressure Drop	33
3.8 UV light bulb system design.....	33
3.8.1 Sizing the UV light system:.....	35
3.8.2 UV hydraulic loading:	36
3.8.3 Determining the UV Transmittance (UVT) of the water:	38
3.9 Monitoring and control of the system.....	38
3.9.1 Project Planning and Milestones	38
3.10 Automation of the system.....	39
Arduino board.....	39
3.10.1 The Circuit diagram:.....	42
3.10.3 The code.....	48
3.11 Material selection.....	48
4.CHAPTER FOUR: PRESENTATION AND DISCUSION OF RESULTS	49
4.1 Simulation using ANSYS Fluent and solid works	49
4.1.1 PROCESSES INVOLVED IN SIMULATION OF CERAMIC FILTER.....	50
4.1.2 PROCESSES INVOLVED IN SIMULATION OF THE CENTRIFUGAL PUMP	53
4.2 Vent pressure Quantification of water at the shower head.....	56
4.3 Design of the ceramic filter	56
4.4 Electrocoagulation unit.....	57
4.5 Clear water tank.....	59
4.6 Characterization of the water.....	60
4.7: A graph showing system performance	61
4.9 Economic analysis	62
4.9.1: Initial investment in constructing the automatic recyclable shower system.	62
4.9.2 Maintenance costs.....	63
4.9.3 Savings to be made by using the shower.	63

4.9.4 Calculating the salvage value	64
4.9.5 Calculating NPV	64
CHAPTER FIVE: CONCLUSION AND RECOMMENDATION	65
5.1 Conclusions	65
5.2 Recommendations.....	66
6.0 References.....	66
