ABSTRACT

Uganda is one of the countries in Africa which has an agro-based economy that feeds the population and other foreign countries through exports. Proper crop disease diagnosing tools and information about agricultural practices is key to the growth and development in the agricultural sector. In order to help farmers, get real time answers on queries about agronomic practices and also get accurate diagnosis about their crops, we have built an android application using a dataset collected from farmers in eastern Uganda and some parts of northern Uganda. This application can answer queries on land preparation, seed selection, planting, crop maintenance, harvesting and good storage practices on any of the three major crops in Uganda that's cassava, maize and beans. It can also help farmers diagnose cassava crop diseases with an accuracy of 94%. This application is active and available 24/7. The Q&A component was built using machine learning and natural language processing. In building the model, an S. BERT transformer model was used and even with a Bleu score accuracy of 60%, the system provides useful and clear feedback to agronomic queries in any of the three crops mentioned above. With such an application, farmers can progress towards easier information about farming related practices, crop disease diagnosis and hence a better agricultural output.

Table of Contents

APPROVAL	I
DECLARATION	II
ABSTRACT	III
1 CHAPTER 1: Introduction.....	1
1.1 Background	1
1.1.1 Agriculture in Uganda.....	1
1.1.2 A Smallholder farmer	1
1.1.3 Machine learning	2
1.2 Problem Statement	2
1.3 Objectives.....	3
1.3.1 General objectives	3
1.3.2 Specific Objectives.....	3
1.4 Significance of the Study	3
1.5 Scope	3
2 CHAPTER 2: Literature Review	4
2.1 Existing Agricultural applications in Uganda	4
2.2 Existing Applications in other Countries and NLP techniques.....	5
2.2.1 Existing in other Countries	5
2.2.2 NLP Techniques applied in building real time feedback systems.....	5
3 CHAPTER 3: Methodology.....	8
3.1 Data collection	8
3.2 Feature Extraction	8
3.2.1 Data analysis.....	8
3.2.2 Stop words removal	8
3.2.3 Stemming.....	9
3.2.4 Lemmatizing.....	9
3.2.5 TFID Vectorization	9
3.3 Building and Training Real Time Feedback Models	9

3.3.1	Transfer Learning.....	9
3.3.2	Retrieval based-model.....	9
3.3.3	Generative Models.....	12
3.3.4	Ensemble based model.....	13
3.4	Testing of the model accuracy	13
3.4.1	Precision and recall (F1 score).....	13
3.4.2	Bilingual Evaluation Understudy(BLUE).....	14
3.4.3	ROUGE	14
3.4.4	Perplexity	14
3.4.5	Integration into a mobile App.....	14
4	CHAPTER 4: Methods and Materials	15
4.1	Data Collection	15
4.1.1	Interviewing farmers.....	15
4.1.2	Online database	16
4.2	Text Preprocessing	18
4.2.1	Spelling Correction and punctuation removal	18
4.2.2	Rephrasing answers	18
4.2.3	Removing unanswered questions	18
5	CHAPETR 5: Implementation and Metrics.....	19
5.1	Mobile Application Components	19
5.1.1	Image classification task (Diagnostic tool)	19
5.1.2	QA task (Feedback tool)	19
5.2	NLP Model Selection.....	21
5.2.1	S. BERT model Architecture.....	23
5.3	Results.....	24
5.4	Metrics.....	25
5.5	Model Deployment and app integration	26
6	CHAPTER 6: Discussion and Conclusion.....	27
6.1	NLP Model and Android app	27

6.2 Recommendations	27
6.3 Conclusion	27
Appendix A: Attached CD containing code for the entire project	28
Appendix C: References	29

List of Acronyms

NLP	Natural language processing
Seq2seq	Sequence to Sequence
TFID	Term Frequency Inverse Document
GRU	Gated Recurrent Unit
LSTM	Long Short Term Memory
RNN	Recurrent Neural Network
