

FACULTY OF ENGINEERING

DEPARTMENT OF COMPUTER ENGINEERING

FINAL YEAR PROJECT REPORT

TITLE: AN INDOOR AIR QUALITY MONITORING SYSTEM

BY

Chelangat Job Chemorput

REG. NO: BU/UG/2017/1855

Email: chelangatjob1@gmail.com

TEL: +256772968954 / +256751076784

SUPERVISOR: Dr. Ocen Gilbert

A project report Submitted in partial fulfilment of the requirements for the award of a Bachelor's degree in Computer Engineering from Busitema university, February 2022

DECLARATION

I CHELANGAT JOB CHEMORPUT, BU/UG/2017/1855 declare that this project report is original and has not been published or submitted before to any university or higher institution of learning.

Signature:

Date:

APPROVAL

The project report titled “An Indoor Air-quality Monitoring System” has been under my guidance and is now ready for examination.

Signature:

Date:

Dr. Ocen Gilbert

Department of computer engineering

LIST OF ACRONYMS

CO ₂	Carbon dioxide
SO ₂	Sulphur dioxide
NO ₂	Nitrogen dioxide
NH ₃	Ammonia
IDE	Integrated Development environment
EPA	Environmental protection Agency
WHO	World Health Organization
VOCs	Volatile organic compounds
LCD	Liquid crystal display
AQI	Air Quality Index
IAQ	Indoor air quality
PCO	photocatalytic oxidation

LIST OF FIGURES

Figure 1: System logical diagram	10
Figure 2: System physical design.....	11
Figure 3: Shows components connections soldered on a circuit board.....	12

LIST OF TABLES

Table 1 Existing system comparison table.....	5

LIST OF TABLES	iv
ABSTRACT	vii
CHAPTER ONE: Introduction	1
1.1 Background.....	1
1.2 Problem statement.....	2
1.3 Objectives	2
1.3.1 Main Objective.....	2
1.3.2 Specific Objectives	2
1.4 Justification	3
1.5 Scope.....	3
1.5.1 Technical scope.....	3
1.5.2 Time scope.....	3
CHAPTER TWO: Literature review.....	4
2.1 Introduction.....	4
2.2 Related systems.....	4
2.2.1 Smart air.....	4
2.2.2 Air purifiers and air cleaners.....	4
2.2.3 AirQo	4
2.3 Existing system comparison table.....	5
2.4 Developed system	6
CHAPTER THREE: Methodology	7
3.1 Introduction.....	7
3.2 Requirement gathering.....	7
3.2.1 Literature review	7
3.2.2. Consultation	7
3.3 Requirement analysis	7
3.4 System design	7
3.4.1 Equipment and tools used	7

CHAPTER FOUR: System analysis and design.....	9
Introduction.....	9
4.1 System analysis.....	9
4.2 Requirement identification.....	9
4.2.1 Functional Requirements	9
4.2.2 Non-functional requirements	9
4.3 System design	10
4.3.1 Logical design of a system.....	10
4.3.2 Physical design.....	11
CHAPTER FIVE: Implementation and testing.....	12
5.1 Development and design platforms.....	12
5.1.1 Arduino	12
5.1.2 Proteus simulation software	12
5.2 Code design.....	12
5.3 Testing.....	12
5.3.1 Unit Testing	13
5.3.2 Integration Testing	13
5.3.3 System Testing.....	13
5.3.4 System evaluation	13
CHAPTER SIX: Discussion and Recommendations.....	14
Introduction.....	14
6.1 Summary of the work done	14
6.2 Appraisal of the project.....	14
6.3 Challenges.....	14
6.4 Proposals / Recommendations	14
6.5 Conclusions.....	14
References.....	15
Appendices.....	18
6.5 System Code	18

ABSTRACT

Worldwide, most modern populations tend to spend approximately 90% of their time in different indoor environments. Along with the penetration of outside air pollutants, contaminants are produced in indoor environments due to different activities such as heating, cooling, cooking, and emissions from building products and the materials used. As people spend most of their lives in indoor environments, this has a significant influence on human health and productivity.

This research focused on addressing the major gaps that have been existing in maintaining good indoor working conditions. This happens through keeping track of the indoor air pollution levels and controlling their concentrations by varying the indoor air flowrate. The system further automatically produces warning signals (sound) for the worst scenarios.

The system achieves its functionality through the use of sensors that measures pollutant concentration in an indoor environment and control the pollutant levels using a ventilation fan.
