SUPERVISORS

Dr. NIBIKORA ILDEPHONSE

Mr. TIGAWALANA DAN

This final year project report is submitted to the Faculty of engineering in partial fulfillment of the requirement for the award of the Degree of Bachelor of Polymer, Textile and Industrial Engineering of Busitema University

FEBRUARY 2022

DECLARATION

I Mugisha Bruce declare to the best of my knowledge that this final year project report is as a result of my research and effort and it has never been presented or submitted to any institution or university for an academic award.

DEDICATION

I pleaurably dedicate this report to my beloved family especially my sibilings who have endeavored to adequately provide and care for me through thick and thin in absence of our beloved mother who left we at tender ages, May the Almighty God bless you abundantly.

Special dedications to the directors, staff and proprietors of the then Juna Amagara Ministries and now Hope Partners Africa for their support they rendered to me so as to reach where I have reached. Please, I salute you for your kind, generous and compassionate hearts. May the Almighty God bless you!

ACKNOWLEDGEMENT

I greatly thank the almighty God the good work he has done in me for the four years down the road. I gladly appreciate my dear supervisors for their endless time and concerted efforts offered ever since I started the consultations for the success of this final year project report. It's regretting not to acknowledge all my friends and course mates for their sincere support in all ways possible.

ABSTRACT

Plastic waste which is increasing day by day becomes an eyesore and in turn pollutes the environment, especially in slum areas. PET waste that remains uncollected from the environment ends up in the drainage channels, wetlands, and natural water sources hence blocking the water flow which causes floods and breeding sites for mosquitoes which eventually leads to outbreak of diseases. Floods lead to poor hygiene and loss of property (buildings). In Uganda, the most affected slum areas around Kampala city include; Kalerwe, Bwaise and Banda. A developing country like Uganda that is experiencing rapid urbanization and industrialization and as a result a lot of infrastructure developments lead to shortage of construction materials. Pavement blocks are perfect materials on the pathways and streets for simple laying and finishing.

Therefore, this report gives an overview of the various activities conducted in utilizing polyethylene terephthalate (PET) waste in making paving blocks reinforced with pineapple leaf fibers (PALF).

Pineapple leaf fibers (PALF) were extracted and the fiber surface was be chemically treated/modified with alkaline sodium hydroxide so as to remove impurities and improve interphase bonding between fiber and matrix. The properties of the treated and untreated fibers were determined using the single fiber tensile tester and SEM TESCAN was used to analyze the surface morphology of the treated and the untreated fibers. Paving blocks were made by melting 150g of PET, mixing with 500g of sand, adding 0.92% of pineapple leaf fibers followed by mixing thoroughly to obtain a homogeneous mixture. The obtained mixture was poured in the prepared mold and the block was left to dry and cure for at least 7 days before taking it for testing. This procedure was repeated for different ratios of 172g, 172g, 225g, 225g, 225g, 278g, 278g and 300g of PET with 0.27%, 1.52%, 0.00%, 1.66%, 0.83%, 0.23%, 1.31% and 0.75% of PALF respectively so as to obtain different samples. A Tenstometric materials testing machine was used to test for compressive strength of the paving blocks. An analytical balance was used to weigh the paving blocks before and after dipping them in water for a period of 24hrs and water absorption rate was calculated.

TABLE OF CONTENTS

DECLARATION	i
APPROVAL	ii
DEDICATION	iii
ACKNOWLEDGEMENT	iv
ABSTRACT	v
TABLE OF CONTENTS	vi
LIST OF TABLES	ix
LIST OF FIGURES	x
ABBREVIATIONS/ACRONYMS	xi
CHAPTER ONE: INTRODUCTION	1
1.1 Background	1
1.2 Problem statement	4
1.3 Objectives	4
1.3.1 Main objective	4
1.3.2 Specific objectives	4
1.4 Justification	5
1.5 Significance of the study	5
1.6 Scope of the study	5
1.6.1 Conceptual scope	5
1.6.2 Geographical scope	5
1.6.3 Time scope	5
CHAPTER TWO: LITERATURE REVIEW	6
2.1 Overview of Plastics	6
2.1.1 Polyethylene terephthalate (PET)	7
2.2 Overview of pineapple leaf fiber (PALF)	8
2.2.1 Extraction of PALF	10
2.2.1.1 Hand scrapping method/ manual extraction	10
2.2.1.2 Novel technology	11
2.2.1.3 Scrapping machine	11
2.2.1.4 Decorticator machine	11
2.2.1.5 Raptic two roll machine	12

2.2.2 Surface modification of PALF	12
2.2.3 Characterization of PALF	14
2.3 Overview of Composites.....	14
2.3.1 Fiber-Reinforced Composites.....	16
2.3.1 Composite manufacture methods	16
2.4 Previous work related to utilizing natural fibers and plastic waste in production of composites.....	16
CHAPTER THREE: METHODOLOGY	18
3.0 Introduction.....	18
3.1 Materials	18
3.2 Methods.....	18
3.2.1 Methodology for specific objective 1.....	18
3.2.1.1 Extraction of PALF	18
3.2.1.2 Characterization of PALF.....	18
3.2.2 Methodology for specific objective 2.....	20
3.2.2.1 Surface modification of PALF	20
3.2.2.2 Determining properties of the surface modified PALF.....	20
3.2.3 Methodology for specific objective 3.....	20
3.2.3.1 Composite manufacture.....	20
3.2.3.2 Determining selected physical and mechanical properties of the paver samples.....	22
CHAPTER FOUR: RESULTS AND DISCUSSIONS.....	24
4.1. Fiber length	24
4.2. Effect of sodium alkali treatment on surface of the fibers.	25
4.3. Effect of varying compositions of treated fibers on mechanical properties of the composite.	27
4.3.1 Results for compressive strength of pavers	27
4.3.2 Results for Water absorption rate	27
4.3.3 Analysis of the effect of PALF fraction on the selected properties of the composite..	28
CHAPTER FIVE: CONCLUSIONS, CHALLENGES AND RECOMMENDATIONS.	30
5.1. Conclusions	30
5.2 Challenges	30
5.3 Recommendations	30
EXPENDITURE	31
